

INFRASTRUCTURE PROTECTION SERVICES

Valencia IIP: our name and our focus is Information & Infrastructure Protection. What makes us different is our holistic, integrated perspective.

Whether industrial systems (SCADA, ICS) or consumer technology (IoT), the commoditization of physical control and monitoring systems requires security assurance. Valencia IIP understands the increasing threats and vulnerabilities to these hardware-based systems.

Today's issues affect not only common IT infrastructure and network appliances (switches, routers, firewalls), but also embedded equipment that form the core of most integrated ICS architectures.

Our hardware assurance services consist of:

- ◆ Creating or updating policy and procedure documentation
- ◆ Assessing the administration and maintenance of:
 - ◆ Hardware, operating systems and ICS applications
 - ◆ ICS networks and secure communication/connection with other networks
- ◆ Assessing the isolation of SCADA systems
- ◆ Perform privacy impact assessments to identify project/program/initiative privacy risks.
